

eServices

eServices is our suite of online reporting tools which allows the management of inspection reports online. Updated daily, the system will assist with the management of plant and machinery.

eServices provides the following facilities:

InTerFACE

InTerFACE provides quick and secure access to examination records and historical data.

Features of the system include:

- View and print inspection reports locally
- Defect analysis
- Plant Not Available (PNA) report
- Inspection programme details
- Download data into spreadsheets
- View individual plant item details
- Search facility to locate items of plant and reports
- Ability to add item and report related notes
- Dedicated customer support helpline
- Facility to view Allianz Engineering produced Written Schemes of Examination.

Email Notifications

- 1 Customers are sent a summarised email once their reports are available detailing locations and defect codes reported. Link directly into InTerFACE to view and manage those inspection results.
- 2 Monthly Plant Not Available summary.
- 3 Monthly summary of inspections due.

eReporting

Inspection reports are sent in PDF format via email as they are available.

Report Data Transfer

Report data transfer allows our system to “talk” to the customers’ asset management system directly which allows users to access all their asset information in one place.

Management Information

Management Information area is provided in two sections.

- 1 Customers can access commonly requested reports to download as required, such as:
 - Gap analysis – shows the discipline inspected at each location
 - Reports issued between dates
 - Plant Not Available report, including reasons the examination was not possible.
- 2 Custom Reports where management reports can be built to suit individual requirements and saved for periodic use.

Our electronic reports systems have dramatically reduced any inefficiencies making inspection programme management both simple and effective.
